During investigations in Term 3 we focussed on Natural disasters. Students explored volcanoes, storms and earthquakes and looked at how they are formed, the destruction they can cause, the negative and positive impact on local communities, and the clean-up involved following a natural disaster. Students then chose a natural disaster to focus on and created posters, models and experiments to represent their understanding. Students held a Natural Disasters Presentation for the school and wider community to showcase what they had learnt and created. The overwhelming success of the presentation was astounding. Staff, students and family members alike were amazed at the thought and effort the students had put into their creations. The Senior Team would like to thank everyone who attended the presentation and those at home who helped the students create their masterpieces. The assistance and support behind the scenes was, and always is, greatly appreciated.
