Scienceworks!

This term the Senior Learning Community went exploring down at Scienceworks. The students have been investigating natural disasters in Term 3 and were excited to find out how lightning was created and how it affected different materials during a lightning storm. Students also enjoyed the Alice in Wonderland and Sports exhibits. Many were also fascinated by the Think Ahead exhibit which explored current and potential future inventions. Students were able to design their own sustainable city and car, and could explore what the world may look like in the years to come. Students and teachers alike had a very interesting and informative day.
